

TEKNEU®

Workshop equipment

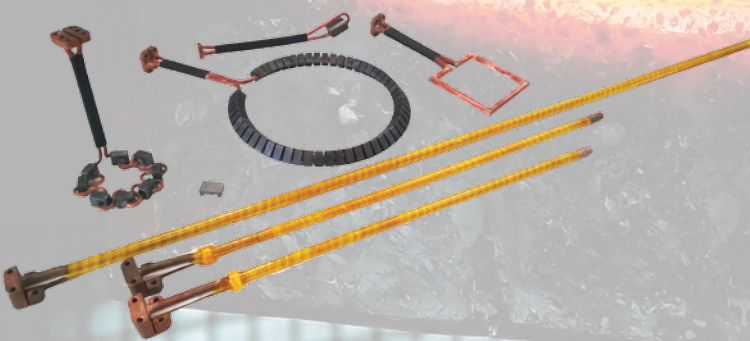

XPERIENCE DUAL CORE cod: XP22

22kW | **INDUCTION HEATER**

Machine with outstanding power designed for special heating applications that can't be done with standard machines; it is suitable for ferrous materials and metals in general, aluminium included. It's equipped with a double cooling system for very long working times without interruptions. With its powerful Dual-core processor, this special machine can be used with inductors of different shape, which is impossible for any other machine. This will allow you to have the tool that fits perfectly to the work you have to do.

SPECIAL APPLICATIONS

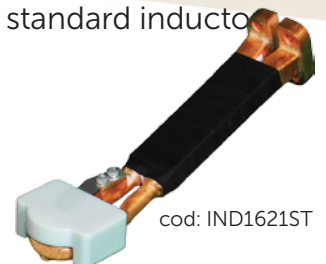

- PREHEATING OF BIG PIPES FOR WELDING
- UNSCREW HOLLOW BOLTS
- CUSTOMIZED INDUCTORS
- AUTOMATION THROUGH PLC
- POSSIBILITY OF CONNECTION TO THE INDUSTRIAL COOLING SYSTEM

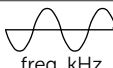

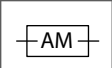

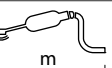

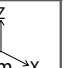

XPERIENCE XP21 cod: XP21

21kW | **INDUCTION HEATER**

The Xperience XP21 is a machine of outstanding power designed to heat ferrous materials and metals in general, aluminium included; it's equipped with a double cooling system for very long working times without interruptions; it enables to bring to red-hot a surface of 40x40mm (20mm thick) in only 3 seconds. The Xperience XP21 has the same super cooling system and chassis as the XP22, but with a different processor, which allows to have a lot of power concentrated in the standard inductor.

Front inductor cod: IND1621FRST
