Workshop equipment

TWIN16+

cod: TWIN16

2x16kW

INDUCTION HEATER

Machine with a double heating system to work on more points at the same time, or to supply high power on a single piece to work. The TWIN POWER induction heaters series for ferrous materials and aluminium has been designed to meet the needs of the most innovative workshops and to carry out the most difficult works: with a TWIN POWER induction heater you can heat more points of a single piece AT THE SAME TIME, doing the operation in less time and easily.

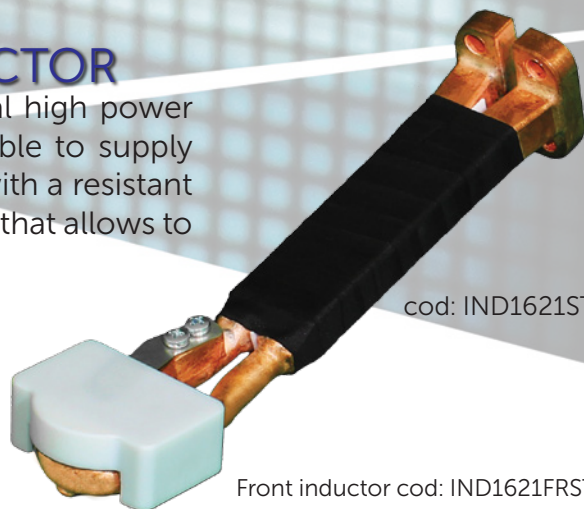

Also available in 2x7,5 and 2x11kW of power

This induction heaters series, built to guarantee the best performance and reliability, is recommended for the heaviest and most difficult uses. Suggested for industrial body shops, industries and big mechanical workshops. All our machines are equipped with an **INSULATION TRANSFORMER**, to ensure the operator and absolute safety, even in the most unfavourable and unpredictable situations.

NEW HIGH POWER EFFICIENCY INDUCTOR

All high power machines come out with this new special high power efficiency inductor: thanks to its particular shape, it is able to supply much more power than the old ones. It is also provided with a resistant protection cap made of teflon, with a new holding system that allows to hold the ferrite in position without using any type of glue.
