32kW

PRE HEATING FOR WELDING

Machine designed to preheat tubes before welding. It's ideal for oil pipelines, gas pipelines, etc.

The absence of free flames will allow you to work even near parts sensible to heat, like plastic parts or cables.

Thanks to its double heating winding, you'll be able to heat simultaneously two parts of the piece to work, or give more heating power to the same part.

TECHNICAL FEATURES:

- Max power: 32kW, separate power adjustment
- Supply: 400V@50/60Hz, 50A
- Work frequency: 10-50kHz auto regulation
- Max pipe diameter heating: 1000mm
- Cooling system: liquid

PRACTICAL APPLICATIONS

- Preheating for welding (pipelines)
- Welding tempering
- Paint removal
- Coatings removal
