

PHOENIX: REACH IMPOSSIBLE GOALS

PHOENIX

cod: PHX05

5kW

BATTERY INDUCTION HEATER

It's the world's first induction heater powered by battery. With its 5kW of heating power and its small dimensions, Phoenix is the ideal tool to work offsite.

Thanks to its extraordinary characteristics Phoenix can be considered unique in the world: with its 5kW of heating power it's the most powerful battery-powered machine on the market; its compact and light design make it incredibly versatile and easy transportable. It allows to carry out works of road assistance, dismantling of guard rails or works in places where electrical connection is not available, for example a cable car: this is an impossible goal for any other machine.
