BODY SHOP MULTIPURPOSE

Machine designed to carry out various body shop works with 4 interchangeable tools: dent removal tool, label removal tool, windshield removal tool and bolt removal tool. It's the ideal machine to dismantle every kind of material glued on metal support without damaging the piece that has to be dismantled. It allows to unlock rusty bolts, to remove paint, to remove thermal rear windows, side windows, moldings, sound deadening sheaths, insulating sheaths, stickers without leaving any glue residue. With the tools for removing stickers, windscreens and bolts it's even possible to work on aluminium.

The power cable of the machine and the tool cable are both 3 metres long, so it's possible to work up to a total distance of 6 metres. The machine is equipped with sound signal, has a powerful cooling fan and a strong stainless steel handle. Moreover the button to start the induction is situated directly on the tool, not on the pedal: this means that it is much more comfortable to work even in the most difficult places (for example to remove a sticker on a coach), without the need of moving continuously a pedal button.
