## Workshop equipment

DRAGON'S BREATH cod: DB16

1,6kW

PLASTIC WELDER

Machine designed to repair the damaged plastic parts of the car body. Through a temperature-controlled air jet it is able to melt some plastic rods which will interact and amalgamate perfectly with the repaired part, assuring better resistance and elasticity.

No smoke inhalation during this working and welding phase, also thanks to a special pistol. Possibility to regulate the temperature directly on the pistol, digital thermometer on it.

Pressure regulator and manometer

the pistol tube 2,75 metres long and the power cable 2,8 metres long allow you to work up to a total distance of 5,55 metres. It is possible to repair broken plastic portions and even rebuild missing plastic portions. Coupling for the air compressor

Nozzles kit for air exit

You can work the repaired portion of plastic after only few seconds

DRAGON'S CLAW

3,7V

PLASTIC STAPLER

Teknel Dragon's Claw is a staple welder for plastic, used to repair broken or cracked plastic parts of the body shop. It heats a steel clip, which penetrates the plastic and strenghtens its structure. Powered by battery, light and easy to handle, you can use it in the most difficul and dark places, thanks to its LED light which illuminates the point where you're working. It comes up with 3 different types of clips, to adapt to every type of reparation and application. There is a battery charger with 4 different plugs for every kind of wall socket and a handy case for the transport. It is equipped with a LI-ION battery for a longer lasting charge.
